PROJECTS

- **FACE DETECTION ATTENDANCE SYSTEM | Sept '20**
 - The attendance management system is a difficult process if it is done manually. The smart and automated attendance system using biometrics, Face recognition is one of them. By using this system, the issue of fake attendance and proxies can be solved.
 - **Language used : Python | Libraries used : pip, OpenCV, Numpy**
- **E-Voting System using Blockchain Technology | Dec '20**
 - Blockchain based E-Voting structure which is more secure than the existing one. An asynchronous model to store voting information is created in order to avoid manipulation of votes. model to store credentials is designed to provide non-repudiation and authentication.
 - **Language used : Python, HTML, CSS | Libraries used : pip, flask | DataBase : MongoDB.**
- **MatchMaker | Mar '21**
- Matchmaker is a Match making/Dating Application. In this Pandemic we all need someone to talk to and my app will help others to find that someone. By using this app the case of potential depression could be cured and lack of communication could be solved.
- **Language used : Kotlin | DataBase : FireBase**
